Version 1.9

Contents

- Wordpress import script

- Minor layout adjustments

Version 1.921 2016-09-24

- Fixed headers for cache control

- Added fine-grained pagination options

Version 1.920 2016-09-11

- Index each text twice, once with and once without diacritics (xapian)

- Prevent the maintainer's scripts to run as root

- Debian package provides a wrapper for root, called amusewiki

- Save the bookbuilder sessions in the database

- Implement bookbuilder session resuming by token

Version 1.916 2016-08-13

- Updated translations

Version 1.914 2016-07-26

- Internal minor refactoring for JSON serializer

- Fixed crash (pretty nasty) when the admin set the locale to sr

- Fixed crash if xapian is out of sync with the db

Version 1.912 2016-07-22

- Code support (but empty localization so far) for Albanian language

- Added js to show the footnotes in the text

- New fonts dimensions in the bookbuilder: 13 and 14pt

- New bookbuilder option: unbranded PDF

Version 1.910 2016-07-18

- Fixed pagination sorting with same date

- Enlarged fields in the creation page

- Added localized /help/faq from documentation

- Added /help/irc with livechat for users which can edit the pages (by default, points to #amusewiki on freenode).

- I18N update: es, it, hr

- Make the pagination configurable (GH #62)

- Move the infobox to the bottom only if configured so for blog-styled

- Editing page: various layout fixes (uses ajax for speedup) (GH #60)

- Handle the unicode exceptions grafully (it was spamming errors on bad requests) (GH #65)

- Added meta description to categories and texts (GH #58)

- Added option to turn links to images into actual images (GH #53)

- Tested and adjusted custom template support (GH #64)

- Added profiles for BB (GH #61) (experimental, but working, probably will need some adjustments)

Version 1.904 2016-07-04

- Added documentation for FreeBSD (and tested on this OS)

- Fixed some portability issues in the helper scripts

Version 1.903 (2016-07-01)

- Fix for debian packages, triggering crash on site creation.

Version 1.902 (2016-06-28)

This is a bugfix release, but comes with some improvements.

- Minor optimization and layout fixes

- Added teaser, image and thumbnails to the OPDS entries

- Serve thumbnails with XSendfile if available

Version 1.901 (2016-06-27)

- Paginate the listing of texts under categories and add breadcrumbs there

- Added next/prev links in the head when paginating the results (SEO)

- Hide pubdates from category items when not in blog style mode

Version 1.900 (2016-06-25)

- New blog mode, which can be activated in the admin console, per site. The blog mode changes the behaviour of the site giving it a time-centric display of texts.

- Flexible tag cloud which can be embedded via ajax

- Free form HTML layout elements (top, bottom, left, right)

- Support for teasers and decorative images

- Monthly archives which can be embedded via ajax

- Legacy links support

- Revamped and reorganized admin console

- Attached images preview in the edit screen

- Selectable CSS themes
